*On the land which has been the family's for five generations, the Saumade family has always held great importance to the production of quality wines. The Mediterranean Sea's proximity as well as the clay-limestone soil allow a wide selection of grape varieties which are then carefully vinified, permitting the production of wines that are enjoyed in France and around the world - 60% of the production is exported (Europe, Canada, the United States, and Japan).*

## VINIFICATION :

After the mechanical harvest on optimally ripe grapes, the destemming process is done before the controlled fermentation between 28 and 30°C in tanks. The bottling of the cuvée Grande Réserve is done with no prior filtration in order to obtain a better preservation of its aromas and gustatory quality.

## *Sustainable agriculture*

### Grande Réserve

A blend of Cabernet Sauvignon and Merlot only from our best vintages, this wine fits perfectly to an oak barrels ageing process.

We pay close attention to this process so that the woody aromas do not mask our terroir expression.

The Grande Réserve bears coffee, cocoa and black fruits aromas.

It may already be tasted, although it may also be “forgotten” for fifteen to twenty years.

*Average alcohol content: 13,5% vol.*

*Best served at 16-17°C.*

*Conservation. 15 years and more.*

*Grape varieties: Cabernet Sauvignon and Merlot.*

*Aromas: Cocoa, coffee and black fruits.*
